

**ROBIN
PHARMA**

FiltaBac products are available throughout Australia from your local Veterinary Clinic, Equine or Pet supplier.

What is FiltaBac[®] Cream?

FiltaBac[®] Cream acts as a totally natural second skin, has anti-bacterial properties, protecting skin cells as they return to normal (cells remain moist, can breathe and expel serum/fluid).

FiltaBac[®] Cream provides a barrier to the damaged area from environmental influences - rain, dirt or insects.

FiltaBac[®] Cream also gives total sunblock protection to any white, finely haired or hair-less areas from sunburn.

FiltaBac[®] Cream is specifically designed for use on large and small animals, your first aid option at home and in the field.

(Caution: white cats, in particular, may react to the anti-bacterial and zinc oxide in FiltaBac[®] Cream – please consult your Veterinary Professional).

How to use FiltaBac[®] Cream:

1. Cover the visibly damaged skin area with a reasonably thick coating of FiltaBac[®] Cream. This will naturally replace the lost skin.
2. Re-apply FiltaBac[®] Cream to the area for 2-3 days without removing the original cover.
3. After this period, gently remove the FiltaBac[®] Cream from the area by using warm water and a mild soap or dilute antiseptic solution.
4. Pat or air-dry (do not rub) and re-cover with FiltaBac[®] Cream.
Hair will re-grow naturally on the area.

NB: If suturing is likely to be delayed, a cover application of FiltaBac[®] Cream will protect the integrity of the wound and FiltaBac[®] Cream can remain in a wound that is sutured due to its non-reactive anti-bacterial qualities.

When to use FiltaBac[®] Cream:

- Broken and Grazed Skin Areas
- Bites from other horses, cats or dogs
- Cuts and Gashes
- Girth Galls/Girth Rub/Saddle Pressure areas: Pressure must be relieved to allow damaged tissue to heal.
- Bit pressure and mouth damage: Swallowing and ingesting FiltaBac[®] Cream is harmless. Frequent applications are required.
- Fly bites and Insect worry/strike on damaged skin areas: Flies and insects are deterred by FiltaBac's viscosity (stickiness).
- Clipper rash
- Irritated skin: inflamed, weeping areas from mange. FiltaBac[®] Cream will soothe the affected skin area.
- Mud Fever
- Rain Scald - flaky & irritated skin: Gently remove the flaky skin from the body areas. FiltaBac[®] Cream should then be rubbed into the skin to protect against bacteria (anti-bacterial action) and soothe the irritation.
- Sun Block Protection
- Sunburn: skin or from heat lamp exposure
