

Aniwell®

Aniwell products are available throughout the UK from your local Vet, Pet/Vet Pharmacy or Pet supplier.

What is FiltaClear®?

FiltaClear® acts as a total sun block, is an antibacterial protective skin cover for damaged skin areas and can rub in to provide a translucent or near-clear film for use on horses, cats and dogs. The fine film minimises rub off on furniture or carpet.

FiltaClear® contains Bitrex™ an extremely bitter compound that will deter or stop licking of the affected area, ideal over wounds.

FiltaClear® is specifically designed for use on large and small animals.

FiltaClear® is suitable for eventing such as dressage, show jumping or showing when external markings may be a distraction or are not permitted.

FiltaClear® can replace FiltaBac® Cream in those circumstances, continuing to provide sun and wound protection with low to no visual impact.

How to use FiltaClear®:

1. Cover the area to be treated (sun protection or damaged skin area) with a thin visible film. This can be gently massaged in to provide sun blocking action up to 8 hours.
2. A thick layer of FiltaClear® may be used for longer sun blocking protection and as an antibacterial cover.
3. Re-apply FiltaClear® to the area for 2-3 days without removing the original cover.
4. After this period, gently remove the FiltaClear® from the area by using warm water and a mild soap or dilute antiseptic solution.
5. Pat or air-dry (do not rub) and re-cover with FiltaClear®. Hair will re-grow naturally on the area.

When to use FiltaClear®:

- Sun block and wind protection
- Clipper rash: anti licking agent deters causing more irritation
- Irritated skin: inflamed, weeping areas FiltaClear® will soothe the affected skin area.
- Albino or white cats and dogs protection on noses and ear margins, safe to use on sensitive skin areas
- Sunburn: from sun or heat lamp exposure
- Over veterinary procedures, to cover and protect
