

# Aniwell®

TRANSLUCENT BARRIER  
**FILTA  
CLEAR**  
ANTIBACTERIAL CREAM

Aniwell products are distributed throughout NZ by Phoenix Pharm Distributors Ltd. Available at your local Veterinarian or Rural Stockists

## What is FiltaClear®?

FiltaClear® acts as a total sun block, is an antibacterial protective skin cover and can rub in to provide a translucent or near-clear film for use on horses, cats and dogs. The fine film minimises rub off on furniture or carpet.

FiltaClear® contains Bitrex™ an extremely bitter compound that will deter or stop licking of the area it has been applied to.

FiltaClear® is specifically designed for use on large and small animals with sensitive skins.

FiltaClear® is suitable for show animals such as dressage, show jumping or showing when external marks may be a distraction or are not permitted.

FiltaClear® can replace FiltaBac® Cream in those circumstances, continuing to provide sun protection with low to no visual impact.

## How to use FiltaClear®:

1. Cover the area to be treated (sun protection) with a thin visible film. This can be gently massaged in to provide sun blocking action up to 8 hours.
2. A thick layer of FiltaClear® may be used for longer sun blocking protection and as an antibacterial cover.
3. Re-apply FiltaClear® to the area for 2-3 days without removing the original cover.
4. After this period, gently remove residual cream and dirt from the area by using warm water and a mild soap or a non-soap cleanser.
5. Pat or air-dry (do not rub) and re-cover with FiltaClear®. Hair will re-grow naturally on the area.

## When to use FiltaClear®:

- Sun block and wind protection
- Clipper rash: anti licking agent deters causing more irritation
- Albino or white cats and dogs protection on noses and ear margins, safe to use on sensitive skin areas
- Sunburn: from sun or heat lamp exposure
- Over veterinary procedures, to cover, protect and prevent licking.
- If symptoms persist seek veterinary advice
- Do not use around the mouth, lips or on teats of lactating animals.
